CAPITALID

The Liquid Gateway to the Capital & Transactions Ecosystem and Tokenized RWA Ecosystem - *Private Capital Access*

Utility Token/Identity Key | Solana Network|

Whitepaper Date: August 17th, 2026

Contennt

1. Abstract and Executive Summary

1.1 Capital & Transactions Ecosystem

RailBoin (BOIN) is a utility-based digital tool on the Solana blockchain designed to eliminate the friction between public market availability and private ecosystem access. Within this network, BOIN functions as a high-velocity "Bearer Token" and a liquid **"precursor"** voucher that legally proves a capital contribution. It is an *entry asset* that can be traded in Radyum and compatible DEX, peer to peer and further in the NYSE Blockchain announced yet to be developed (if available in time); BOIN could be exchanged and burned for a **CAPITALID (CAPID)** token, which serves as a permanent, non-transferable **Soulbound Identity Key.**

This **Identity Key** acts as a consumable **"gas"** credit required to unlock and activate the comprehensive Entrepreneurial Utility Suite—an inseparable infrastructure package providing unserved businesses with institutional sponsorship, professional representation, a $200,000 USD Line of Capital, and extended financing options of up to $1 million USD. Structurally engineered as a Tokenized Financial Derivative model built on top of Real-World Assets (RWAs), a single unit of CAPID is permanently protected at a 1-token threshold to maintain the user's permanent network identity and ecosystem access rights.

Furthermore, the CAPID layer serves as a direct **pathway to the Bondibill private ecosystem**. Verified keyholders can seamlessly leverage an internal upgrade mechanism to swap their utility identity tokens for institutional, asset-backed **Bondibill (BNDB)** security tokens at a strategic 1:2 multiplier ratio. This advanced corridor bridges immediate transactional utility with long-term, multi-decadal wealth protection—unlocking enterprise capital lines of up to $10 million USD, while holding the Bondibill backed by securities, cash-pool, gold/silver bullion reserves, alongside a stable 67-year monthly passive income stream managed through an asset-protection trust. See bellow Graphic A and B.

```

1.2 The User Experience Flow (User Journey)

The process for your investors and buyers will be exceptionally seamless and secure:

- **RailBoin Token Acquisition:** The user purchases tokens during the PinkSale presale or on the open market via Raydium. Claim Pre-sale tokens via BOIN Utility Portal (The dApp) **(See page 13**).
- **The Visual Lock:** The BOIN tokens arrive in their Phantom wallet. The user can successfully view their balance in their portfolio, but if they attempt to transfer them to a third party or sell them on Raydium, the blockchain will immediately reject the transaction. This occurs because the Monitoring Bot has already frozen their account utilizing the Master Account Freeze Authority.
- **Activation:** The user accesses the railboin-avaltti.com portal to execute a swap and exchange the token for a CAPITALID (KEY-ID). They initiate a combined transaction that temporarily unfreezes the BOIN, routes it to the CAPID Smart Contract to be instantly burned, and in its place, mints the Soulbound CAPID Key-ID. This permanently grants them $200,000 off-chain transactional financing line plus the sponsorship.

2. Tokenomics & Distribution

Derived from official project documentation.

- *Picture:*

- **Official Name**: CAPITALID
- **Ticker:** CAPID
- **Contribution Parity:** 1 BOIN = 1 CAPID (via Atomic Barter)
- **Contribution Parity for Contribution / Donations:** 1USDC: 1CAPID
- **Barter/Swap Policy:** 1 CAPID : 2 Bondibill
- **Transferability:** Non-Transferable (Soulbound).
- **Token Standard:** Solana Token-2022 standard (with a specific Non-Transferable (Soulbound) extension.
- **Hardware Wallet Compatibility:** CAPID is fully compatible with physical hardware wallets (e.g., Ledger, Trezor) via Solana-compatible interfaces . Because CAPID is Non-Transferable (Soulbound) users must use a compatible Solana software interface (e.g., Phantom or Solflare) connected to their hardware wallet to execute dApp-based barters; users intending to use hardware security **MUST** perform the initial BOIN-to-CAPID barter using their hardware wallet address as the destination to ensure their permanent **"Identity Key"** is stored in cold storage. Manual release recipients must provide a secure, permanent Solana address, as these tokens are Soulbound upon minting and cannot be moved to a different wallet later.
- **Utility Classification:** CAPID functions as a **"Refuelable Consumable Utility Credit" and "Idendity Key"** for access to Entrepreneurial Utility Suite, while maintaining a **"Permanent Soulbound Key"** state at the 1-unit threshold.
    - **Dynamic Utility State:** CAPID functions as a **"Consumable Utility Credit"** for capital line access when the balance is > 1, and as a **"Permanent Soulbound Key"** *when the balance is exactly 1.*
- **Total Supply:** 7,800,000 Fixed (Mint-on-demand)
- **Allocation Breakdown:**
    - 7,000,000 CAPID (89.744%): Reserved exclusively for the Atomic Barter Supply (1 BOIN : 1 CAPID). This ensures that the primary gateway for access Entrepreneurial Utility Suite remains decentralized and automated.
    - 800,000 CAPID (10.256%): Designated as "Donation-Based Manual Release" Supply. These token serve as a **"Digital Contribution Receipt"** for contributions and provide access to the Entrepreneurial Utility Suite (including $200,**000 Capital Line, Sponsorship and Professional Representation) upon identity verification.**

Barterable Pool (BOIN-to-CAPID)	7,000,000 CAPID
Manual Donation Pool (Receipts)	800,000 CAPID
Total Barterable Supply	7,800,000 CAPID

2.1 CAPID Utility & Prime Rewards

2.1.1 Summary of Functions setttings incorporated in the smart contract

CAPITALID Smart Contract Functionalities – Table A

Function / Rust Instruction	Main Purpose	Security Restrictions	Token Flow & Parity
initialize_global_state	Initializes the protocol's GlobalState account	Requires admin signature	N/A (state initialization only)
process_capture_first_swap	Captures the first swap and distributes USDC exclusively	Requires user signature; Validates that growth_vault == GROWTH_VAULT	User's USDC → Master Account (Growth/oerationss): (100% direct - no bucket division)
barter_boin_for_capid	Burns BOIN to mint CAPID (Burn-to-Mint)	Validates CAPID supply limit (7M maximum for barter)	BOIN (burned) → CAPID (minted) - 1:1 Parity
barter_capid_for_bondibill	Burns CAPID to mint BNDB (Identity Retirement)	Validates overflow calculation	CAPID (burned) → BNDB (minted) - 1:2 Parity
release_team_vesting	Releases team vesting allocation	Requires admin = PHANTOM_MASTER; Validates 12-month cliff; Validates total limit of 400k BOIN	BOIN from TEAM_RESERVE → TEAM_WALLET - Schedule: 150k Day 1, 62.5k annually after cliff
transfer_hook	Enforces soulbound nature of CAPID (blocks transfers)	Blocks all CAPID transfers (specific mint)	N/A (validation only, no token flow)
release_manual_capid_donation	Releases manual CAPID donation from GROWTH_VAULT	Requires admin = PHANTOM_MASTER; Validates 800k CAPID limit; Validates authorized vault	CAPID from GROWTH_VAULT → user_capid_account - Total limit 800k

2.1.2 Entrepreneurial Utility Suite

Proof-of-Access & The **N-1 Burn Mechanic:** To initiate legal onboarding for the Entrepreneurial Utility Suite (Includes Sponsorship, Professional Representation and a $200,000 USD Line of Capital), the holder must demonstrate ownership of the CAPID token.

- **Consumable Activation:** When a holder desires to use the Entrepreneurial Utility Suite, the protocol treats CAPID as **"gas"** or a **"single-use access permit".**
- **The Burn Protocol:** If a holder possesses more than 1 CAPID, the system will burn N-1 tokens to fuel the access. For example, if a holder has 800 CAPID, 799 will be burned upon use, at balance of at least 1 CAPID becomes permanent, which serves as a permanent, non-transferable **Soulbound Identity Key.**
- **Threshold Protection:** If a holder has only 1 CAPID, or once a high-balance holder reaches their final token, that last token shifts from a "consumable credit" to a Permanent Identity Key. This final token is protected from the capital line burn to ensure the holder maintains permanent access and discount rights.
- **Refueling Access:** Holders may **"refuel"** their consumable credits at any time by purchasing BOIN in the secondary market and swapping it for additional CAPID.

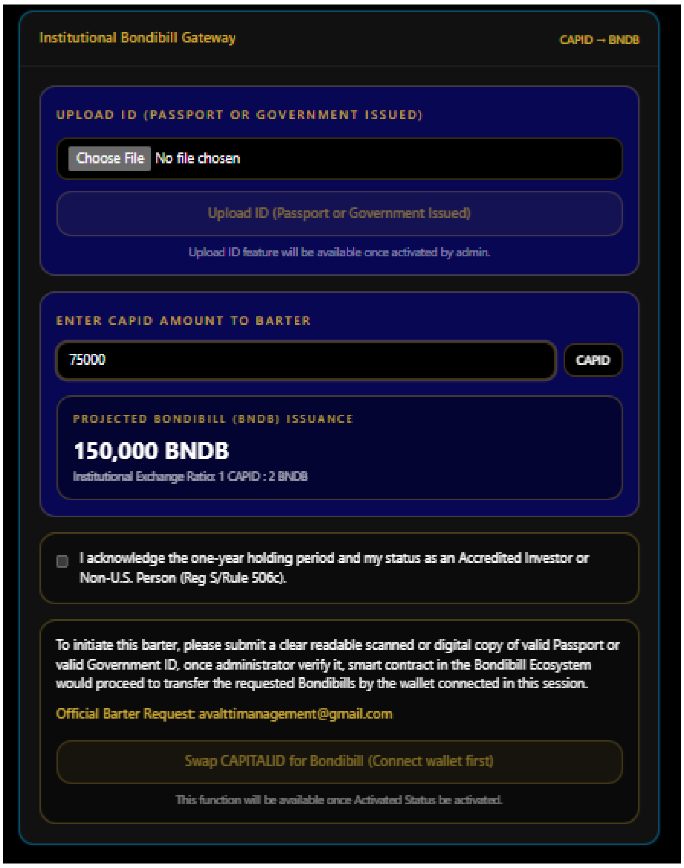
2.1.3 Bondibill Token Release (STR) Discounts

The platform facilitates the acquisition of Security Token that distribute a stream of Income to Holders for +67 years:

- Standard Exchange: 1 Bondibill = 1 USDC (Stablecoin).
- Barter Policy with CAPID: 1 CAPID = 2 Bondibills (BNDB)
- Cash Discount: 20% flat discount on purchases up to a total of $20,000,000 USD.
- Restriction: This 20% discount applies strictly to new capital injections (Stablecoins) and does not apply to assets acquired through the Barter Policy.

[See graphic on next page]

Bondibill Barter Policy with CAPITALID – Graphic D



Bondibill Portafolio Escenario – Graphic E

CAPITALID (CAPID) TO Bondibill
1 USD /USDC : 1 CAPID
1 USDC is backed with US Treasury bill (USD Legal Tender)
Minimum Entry:: USDC 100 (USD 100.00)

Scenario

Contribution:
USDC 1,000.00 = 1,000 CAPITALID- CAPID
Barter Policy: 1 CAPID: 2BNDB
Bondibills Obtained: G//. 2,000.00
Income:
USD$0,15 per Bondibill
67 Year: USD 20,100.00
Anual: USD 300.00
(USDC-Stablecoins)
Monthly Distribution:
USD 25 or USDC 25 (Stablecoins)
Annual Cash Benefit:
USD 300.00/ [USD1,000.00] = 30.00%
Current Yield on Bondibill Portfolio:
USDC 300 / [G//. 2,000] = 15.00%

I. Bondibill Ecosystem

a. Executive Utility Suite:

- Sponsorship, Professional Representation, Capital (+USD 10 millions) all as inseparable package, exclusively for Bondibill Holders; as sale of tokens progress in volumes 30% of such proceeds goes to cash reserves that is used to fund specific private transactions for Bondibill Holders only, such Business Acquisitions, Rental Properties Purchases, Wholesaling Properties, Fix and Flip, Wholesaling commodities such gold and silver using our infrastructure and platform to avoid fraudulent sales, financial risk, human efforts, traveling for inspections.

b. Passive Income for > 67 years

- Monthly Cash distribution for Bondibill Holders on a consistent basis trending permanent distribution for over 67 years in the long term horizone.

c. Digital Asset backed with economic value of

- Assets under management by Bondibill Trust (Securities, Cash, Bullion Gold reserves secured in vaults) are CAPID assets not liquidated and set up to produce legacy passive income to Bondibill holders for over 67 years.

d. Net Asset Reports for Economic Value Calculation

- Quarterly and Annual Reports audited by top accounting firms to provide stakeholders the basis for economic value

e. Private Banking Capabilities for Network and Global Citizens

- Private Banking to store value and protect users from economic cycles or high leverage banking that may jeopardize the value of deposits and whereas values are limited protected by local agencies. As private banking capabilities become effective is expected a high level of scrutinized activity by local financial authorities and Government. To offer offset operational cost and economy risk as well as aggressive taxation policies imposed by local authorities territories such as British Virgin Islands offer a more productive environment to cover operating expenses and marginal profits. Main services to offer include bank account for Bondibill Holders to develop his own business and wealth creation regardless of where the holder lives or operate.

f. Industrial Development

- Bondibill ecosystem expects to deploy resources to facilitate electronic payments and online business or small business to be developed in areas
- whereas banking services are limited to those with high network qualification. Aiming financial inclusion and niche development.

II. The Barter & Burn Policy

The CAPITALID (CAPID) protocol provides a friction-free, cryptographic architecture for participants to transition public asset velocity into a strictly compliant, private transactional environment. This interface is governed by an automated token-clearing matrix structured as follows:

- **Fixed Barter Ratio:** The ecosystem guarantees a strict **1:1 conversion parity** (1 RailBoin [BOIN] : 1 CAPITALID [CAPID]) to generate the necessary identity keys and consumption credits required for the Entrepreneurial Utility Suite and Bondibill (BNDB) ecosystem integrations.
- **Allocation Applicability:** This preferential, automated conversion rate is structurally limited to a total allocation cap of **7,000,000 CAPID** tokens within the programmatic Barter Pool, mirroring the exact, fixed hard cap footprint of the precursor liquid supply.

- **Hybrid Burn Execution Framework:** To enforce a highly deflational, non-speculative landscape, the architecture bypasses typical custom token mint code, utilizing an external smart contract routing engine. Because the liquid RailBoin (BOIN) token is deployed via an immutable, No-Code architecture to maximize infrastructure security, the *CAPITALID Custom Smart Contract* acts as the primary clearing house. It programmatically captures incoming BOIN assets, executing a definitive and irreversible Burn function across the Solana ledger, thereby permanently shrinking the circulating precursor supply.
- **Strategic Discount & Swap Logic:** The standard administrative **"N-1 Burn**" mechanism is exclusively triggered to fuel the baseline legal and operational activation of the Entrepreneurial Utility Suite. Participants utilizing their CAPID balance solely to access exclusive Bondibill (BNDB) token release discounts do not trigger credit consumption. Conversely, if a participant voluntarily elects to convert their utility footprint directly into the asset-backed class via the **1:2 Barter Policy**, the CAPID tokens involved in that specific allocation swap undergo a comprehensive, mandatory **Full Burn**, liquidating the identity wrapper upon asset delivery.

III. Strategic Barter & Conversion Mechanics (BOIN Integration)

To foster seamless interoperability across the Solana network and eliminate manual distribution overhead, the ecosystem operates a automated, multi-instruction conversion corridor via the decentralized application portal (railboin-avaltti.com) or the one the Management and founders decides. Under this framework, holders of RailBoin (BOIN)—the official liquid acquisition asset distributed via the primary PinkSale pre-sale and secondary Raydium pools—are entitled to instant verification mapping. The customized CAPID Smart Contract is engineered to intercept incoming transactional commands and synchronize with the ecosystem's backend **Blockchain Event Listeners (Webhooks)**. When a user executes the conversion sequence, the platform utilizes its verified administrative Freeze Authority to execute a localized, programmatic thaw of the specific user's wallet. Instantly, in a single atomic transaction block, the unfrozen BOIN tokens are pulled into the contract's ledger endpoint, triggering an automatic cross-program invocation (CPI) to the native Solana Token-2022 program to execute the Burn instruction.

Simultaneously, the CAPID Smart Contract mints the corresponding non-transferable Soulbound Identity Key directly back to the participant's receiving wallet address, removing any possibility of manual verification delays or intermediary escrow risk. This execution architecture ensures that the structural 1:2 value multiplier governing the Bondibill Barter Policy is maintained with 100% cryptographic efficiency, while anchoring all public trading volume to the finite, verified lifecycle of the precursor utility token.
Utility Finality: Upon the successful 1:2 swap of CAPID for Bondibill (BNDB), the CAPID identity key is retired and permanently destroyed. This action signifies the completion of the utility lifecycle, and the wallet will no longer have access to the Entrepreneurial Utility Suite unless a new CAPID identity key is acquired.

3. Technical Architecture & Security.

3.1 Token Architecture (The "Receipt")

To be implemented on the Solana Blockchain.

- Token Name: CAPITALID
- Symbol: CAPID
- Token Standard: **Solana Token-2022 Non-Transferable extension**
- Non-Transferable Extension: Enabled. CAPID is a "Soulbound" digital Idenity key. It is non-transferable to ensure that the contribution and the subsequent access rights remain tied to the specific verified individual.
- Issuance Logic: Atomic "Burn-and-Mint" execution via Cross-Program Invocation (CPI).

3.2 Security & Recovery Policy

Because CAPID is a "Soulbound" digital receipt utilizing the Solana Token-2022 Non-Transferable extension, it is technically locked to the destination wallet. Contributors are advised that losing access to the private keys of the verified wallet results in the permanent loss of access to the Entrepreneurial Utility Suite (Includes **Sponsorship, Professional Representation and a $200,000 USD Line of Capital**), as the identity key cannot be re-issued or moved to a different address. However, user can re-fuel and acquire RailBoin to obtain the Identity Key via Barter/Swap mechanism via web-portal.

3.3 Wallet Finality & Compatibility

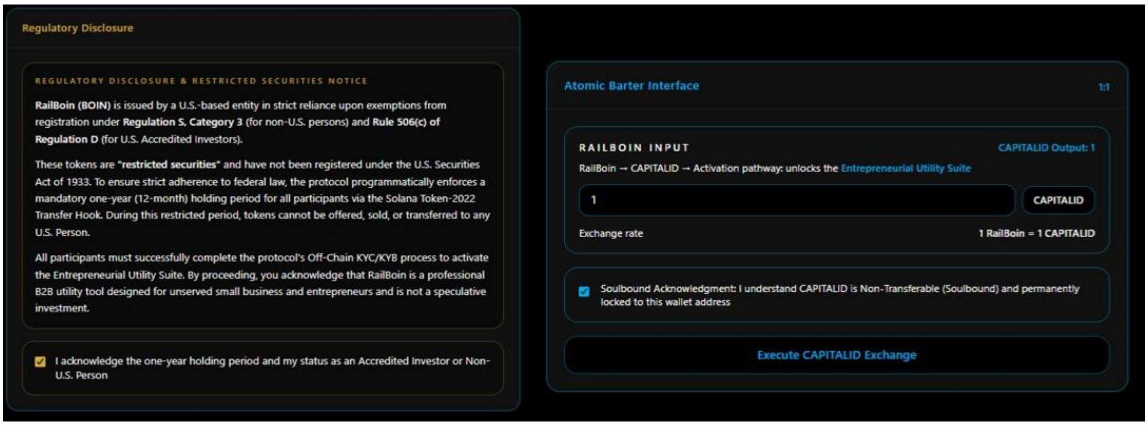
Contributors must ensure that the Solana wallet address used during the "Atomic Barter" (BOIN to CAPID) is their permanent, secure address. Once CAPID is minted, the Token-2022 Non-Transferable extension prevents the token from being moved to any other address—including hardware wallets, secondary Solana wallets, or cross-chain interfaces like MetaMask. The CAPID token is permanently bound to the receiving address; therefore, the security of that specific wallet's private keys is the sole responsibility of the holder.

3.4 Message to Display on Notification for user on dApp:

On the dApp, right before the user clicks "Barter BOIN for CAPID," there shall be a mandatory checkbox that says:

- *"I acknowledge the one-year holding period and my status as an Accredited Investor or Non-U.S. Person (Reg S/Rule 506c)."*
- *"Soulbound Acknowledgment: I understand CAPITALID is Non-Transferable (Soulbound) and permanently locked to this wallet address"*

RailBoin Swapp/Barter - Graphic E



b) Multi-Wallet Onboarding Workflow

The user acquires RailBoin (BOIN) either through the primary PinkSale Pre-Sale launchpad or the secondary Raydium liquidity pool, connects their wallet to the official dApp portal, and initiates the automated Barter protocol to secure their CAPID Identity Key.

c) Compliance & Buyer Identification

The legal mechanism for Entrepreneurial Utility Suite (Includes Sponsorship, Professional Representation and a $200,000 USD Line of Capital).

Identification Policy: To activate the Entrepreneurial Utility Suite (Includes Sponsorship, Professional Representation and a $200,000 USD Line of Capital), the holder must provide a government-issued ID.

Legal Purpose: This identification is required so that company lawyers can identify the "Buyer Party" in future private security purchase agreements funded by the Capital Line and legal representation or commercial contracts preparation.

Asset Status: The CAPID token is strictly an Identity key and is not pledged to physical gold or cash reserves.

AML Standards: Verification ensures that all participants in the CAPID ecosystem are identified and vetted for regulatory compliance.

4. Team & Long-term Vesting

Avaltti Management LLC: *A professional management entity specialized in asset management, private equity funds, corporate transactions, executive services, and board representation, main industry focus is healthcare. Avaltti's founding and management team brings over decades of combined experience across the healthcare industry, operations management, corporate restructuring, business consolidation, and capital formation.*

Founder & Author: *The project was conceived by "Young Grasshopper"—known for apply an Industrial approach in the target industries, as QLP (The Quantum Leap Practitioner). Inspired by shifting market dynamics and the growing public demand for reliable secondary income streams, the founder designed this ecosystem to introduce premium digital assets backed by true intrinsic value.*

4.1 Compliance, Reporting & Trust-by-Code Integration

4.1.1 The Unified Transparency Ledger

In alignment with the "Trust-by-Code" philosophy, the issuance and lifecycle of every CAPID token are recorded on the Global State Account within the Solana ledger. This ensures that the conversion from CAPITALID (BOIN) to CAPID is public, immutable, and verifiable by any participant through the BOIN Utility Portal (dApp).

4.1.2 Automated Audit Synchronization:

The CAPID token serves as the primary **"Identity Key"** for the ecosystem's compliance framework. Its status is directly linked to the protocol's rigorous audit schedule:

- Proof of Reserve: The dApp dashboard provides real-time visualization of the cash available, ensuring the CAPID "Identity Key" always points to a fully collateralized and audited environment.
- Milestone-Based Reporting: Every 90 days, the protocol publishes Quarterly Transparency Reports. The successful publication of these reports is a technical prerequisite for the smart contract to release operational funds, directly protecting the long-term utility value for CAPID holders.

4.1.3 Buyer Identification & Regulatory Alignment

To activate the Entrepreneurial Utility Suite (Includes Sponsorship, Professional Representation and a $200,000 USD Line of Capital), the holder must maintain a minimum balance of at least 1 CAPID. This final token acts as the permanent "key" for company lawyers to identify the "Buyer Party" in legal agreements, even after all other **"gas"** tokens have been consumed. This ensures that the "Buyer Party" in future private security agreements is legally identified and vetted, satisfying global regulatory standards for private capital transactions while maintaining the efficiency of blockchain-based verification. Holding 1 CAPID satisfies the on-chain requirement; however, the legal activation of the Capital Line is triggered by the completion of identity verification (KYC/AML) through the BOIN Utility Portal. This process converts the on-chain identity key into a legally recognized "Buyer Party" status for private security agreements.

5. Roadmap

5.1 CAPITALID Roadmap

Official development stages.

- Step 1: Collect the First 800,000 USDC To Set up 1rst Line of Capital and Bondibill Structure
- Step 2: Publish Proof of Concept with 1rst Line of Capital (1 Trade)
- Step 2: Complete Threshold 40%-50% (USDC 3,120,000 to 3,900,000)
- Step 2: Legal Structure and Establish Banking Relationships for Ecosystem
- Step 3: Entrepreneurial Utility Suite: Immediate Functional Utility & Activation
- Step 4: Publish Transactions closed in Capital & Transactions Ecosystem.
- Step 5: Bondibill Barter Activation & Community consolidation

6. Legal Disclaimer

The CAPITALID (CAPID) token is a non-transferable and Identity Key and acts also as **"gas"** or "Consumable Credit" the Holder obtains via CapitalID (BOIN) release or Donnations/Contribution. CAPID is not a security, is not pledged to physical assets, and does not represent an ownership stake in any trust or company or reserve, it does represent the right of income distribution or profit sharing. Is a Identity Key to activate the Entrepreneurial Utility Suite (Includes Sponsorship, Professional Representation and a $200,000 USD Line of Capital), is governed by off-chain company policy and is contingent upon the successful completion of identity verification (KYC). Identification provided by the holder is used solely to identify the legal "Buyer Party" for private transactions; the CAPID token itself serves only as a functional "Identity key" to access these services as bungle package.

The "N-1 Burn" mechanic is a blockchain-enforced administrative consumption of utility credits for service activation and does not constitute a financial fee or a loss of identity-based access rights, provided the 1 CAPID threshold is maintained.
